SUMMARY

Backend-focused developer experienced building secure, production-grade APIs and database systems with Node.js, Django, Flask, and PHP. Has implemented authentication (JWT, OAuth), payment integration (Paystack), and security hardening (CSRF, rate limiting, XSS filtering) across live business systems including school, hotel, and e-commerce platforms. Comfortable owning a service end-to-end: schema design, API architecture, and deployment.

EXPERIENCE

- Full-Stack Developer — Freelance · Open Source · Academic Projects2022 – Present
- Built RESTful APIs with Django, Flask, and Node.js; implemented JWT authentication and secure session management with CSRF protection
 - Architected and optimized relational databases using PostgreSQL and MySQL, including query optimization and integrity constraints
 - Integrated payment systems (Paystack) across multiple production platforms including school portals, hotel management, and e-commerce stores
 - Deployed applications on Linux (Nginx/cPanel) environments; configured SMTP email, OAuth (Google), and SSL/HTTPS security

PROJECTS

School Management System (EduPortal)

A production-grade multi-school SaaS backend handling student data, result computation, and fee payments.

Node.jsPostgreSQLPaystack

- Designed a relational schema supporting multiple schools, student records, and result computation from one backend
- Integrated Paystack for fee payments with reconciliation and role-based admin controls
- Implemented authentication and role-based access control across student, teacher, and admin roles

Demonstrates: multi-tenant database design and secure payment integration in a live SaaS system

Hotel Management System (StayEase)

A full hotel management system covering room booking, guest records, and payment processing.

PHPMySQLPaystack

- Built the booking and guest-record data model in MySQL, with an admin control panel for hotel staff
- Integrated Paystack payment processing directly into the booking flow
- Implemented access control separating admin and staff-level operations

Demonstrates: backend ownership of a real, in-production business system

SKILLS

- Backend
- Node.jsExpress.jsDjangoFlaskPHP/Laravel
- Databases
- PostgreSQLMySQLMongoDBSQLite
- Security
- JWT AuthOAuth 2.0CSRF ProtectionRate LimitingXSS Filtering
- Bcrypt
- Languages
- JavaScriptTypeScriptPHPPython
- Tools & DevOps
